From: NZ Register of Exercise Professionals

Let's Talk About Continence

Pelvic floor issues, especially incontinence is not something that often makes the topic of our everyday conversations. Or if it does, it's as part of motherhood, or as one of the side effects of older age.

While incontinence, or unexpected bladder leaking spans all ages and genders, it's women especially those who have given birth, or are going through menopause that are most represented in statistics.

It's welcome news that after years of many women simply accepting weak pelvic floor and the resulting incontinence as part of having babies and of ageing, that exercise professionals are supporting women to recover their pelvic floor muscles and make sure exercise is pelvic floor safe. For many of those with weak pelvic floor muscles, exercise, especially jumping and running can cause bladder leakage, so it makes sense that exercise professionals educate on how to manage this during exercise.

However, it's not just about managing the problem, with many exercise professionals across the country now having these issues front and centre amongst their services, and promoting a multi-disciplinary approach with physio support as required. It's not just about managing incontinence, but also strengthening pelvic floor muscles to prevent incontinence in the first place.

A qualified registered exercise professional understands that not all exercises are pelvic floor safe, and that some exercise options can contribute to pelvic floor problems.

So how do you know you are making the right choices when it comes to pelvic floor friendly exercise? Do some research. Many registered exercise professionals have specific pelvic floor safe exercise programmes for those who need them. They understand it's not a topic that is not always easily discussed, so will be able to educate you without embarrassment. They may also refer you to a physio that works specifically in this area. Pelvic floor education is important as women (and men) realise that this is a problem that they do not have to put up with, and that with appropriate professional care they can restore their pelvic floor strength.

The Register of Exercise Professionals in NZ understands that educational resources on issues such as these issues should be available to everyone so a handy 'Tell Me More' information guide is available on Core and Pelvic Floor health. You can request this guide from your local registered exercise professional.

You can also get more information through the www.pelvicfloor.nz website.
